DIGITAL NOTES

For best results files should be submitted as 8 bit RGB JPEG format. File size should NOT exceed 300 DPI @ output size. If submitting TIFF files make sure no layers are included. Color space should be sRGB.

Swan Photo Digital utilizes the latest color management technology from X-Rite. Our digital systems are calibrated and profiled, enabling accurate and consistent control. When we display an image on our calibrated monitors, what we see matches our output devices.

Different computer systems, output devices and color spaces will display and print files differently. What you see on your monitor and what is reproduced on your desktop printer will likely be different from what we see and what our devices print. Likewise, CMYK, spot and Pantone colors or other colors created in the computer will print with great variability on differing output devices.

If you can provide us with a hard copy proof of your original we will do our best to match it. Exact CMYK to RGB and RGB to CMYK conversions cannot be guaranteed.

We currently accept negatives, slides, transparencies, CD, DVD, CF Cards, Smart Media, Memory Stick, SD, XD, Memory Stick Pro.
